

Temperature Input Module mV Ex i / I.S. Inputs, 8 Channels Series 9481

- > 8 channels for thermocouples (DIN, IEC, GOST) and mV sensors
- > Suitable for grounded thermocouples
- > Intrinsically safe inputs Ex ia IIC
- > Galvanic isolation between inputs and between inputs and system
- > Open-circuit monitoring for each field circuit
- > Module can be replaced in operation (hot swap)

The Temperature Input Module mV is used for the connection of up to 8 thermocouples or mV-signals. Each input is individually monitored for open circuits.

The inputs are galvanically isolated with regard to their function so that interfering ground loops are prevented with grounded thermocouples.

The cold junction temperature is compensated internally on the connection terminals.

The interface of the Temperature Input Module with the internal data bus of the BusRail is designed with redundancy.
